Art Unit

1651

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 February 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 and 27-59 is/are pending in the application.
- 4a) Of the above claim(s) 10-24 and 27-54 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 and 55-59 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

Art Unit: 1651

DETAILED ACTION

A response of 2/4/05 presented arguments and did not amend the claims.

Claims in the application are 1-24 and 27-59.

5 Claims 10-24 and 27-54 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/27/03.

Claims examined on the merits are 1-9 and 55-59.

10 The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

15 Claims 1-9 and 56-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foley et al (6,319,662) (newly applied) (listed on form PTO-1449 of 6/13/02) in view of Tsyurupa et al (193 on form 1449) and Davankov et al (110 on form 1449) and Tlustazkova et al (4,634,604) (newly applied), and if necessary in further view of Yamamoto et al (4,725,355) (newly applied).

20 The claims are drawn to removing free psoralen and low molecular weight psoralen photoproducts from blood products by contacting a blood product containing free psoralen and low molecular weight psoralen photoproducts with a hypercrosslinked resin to remove the free psoralen and low molecular weight psoralen photoproducts. Claims 55-59 additionally require brominated psoralen, the resin to be

Art Unit: 1651

nonionic and the free psoralen to comprise free psoralen and free low molecular weight psoralen photoproduct.

Foley et al disclose adding a psoralen compound such as 4'-aminomethyl-4,5',8-trimethyl psoralen (AMT) (col 5, lines 29-32) to
5 blood to inactivate viral contaminants, and then removing the AMT from blood with a material having affinity for the AMT such as activated charcoal, an ion exchange agent or biobeads (col 5, lines 10-13 and line 31).

Tsyurupa et al and Davankov et al disclose using hypercrosslinked
10 polystyrene polymer or hypercrosslinked styrene-divinylbenzene copolymers as a sorbent for removal of a variety of organic compounds from aqueous mediums. The hypercrosslinked copolymers have exceptional high adsorption capacity. See Tsyurupa et al (page 69, right col, lines 14-17, and page 70, left col, lines 6-10, and right
15 col, paragraph (3). Also, see Davankov et al (page 27, page 37, right col, first full paragraph, paragraph bridging pages 37 and 38 and paragraph bridging pages 40 and 41). Tsyurupa et al disclose that the adsorption capacity of macroporous Amberlite XAD-2 is significantly smaller than that of hypercrosslinked polystyrenes (page 73, sentence
20 bridging the columns). Further disclosed by Tsyurupa et al is using the hypercrosslinked copolymer removing organic substances from biological liquids and blood (page 75, right col, number 8).

Tlustazkova et al disclose using styrene-divinylbenzene copolymers such as XAD-2 and XAD-4 as an sorbent to remove toxic

Art Unit: 1651

compounds from blood (col 1, lines 9-15 and 26-32, and col 2, lines 19-22).

Yamamoto et al disclose that it is known to use a styrene-divinylbenzene copolymer as a blood purification sorbent (col 2, lines 7-10).

It would have been obvious to us as the material having affinity for AMT of Foley et al, the hypercrosslinked polystyrene-divinylbenzene copolymer taught by Tsyurupa et al and Davankov et al for the expected advantage of the hypercrosslinked copolymer providing exceptional adsorption capacity since it would have been expected from Tlustazkova et al, and if needed Yamamoto et al, that a polystyrene-divinylbenzene copolymer can be used for removing toxic compounds from blood. Tsyurupa et al disclose using the hypercrosslinked copolymer to adsorb and remove numerous different organic compounds including organic substances from biological fluids such as blood (page 75, right col, section 8) and synthetic dyes (page 76, right col, section 9), and it would have been expected the hypercrosslinked copolymer can be an effective adsorbent for removing a psoralen compound from blood. The hypercrosslinked copolymer of Tsyurupa et al and Davankov et al is nonionic as in claims 56-58. Free psoralen compounds in blood will inherently be a mixture as required by claim 59.

Response to Arguments

Applicants' arguments are moot in view of Wollowitz et al being replaced with Foley et al since the assignee of Foley et al is not

Cerus Corporation, and there is no evidence that Hei invented the subject matter of Foley et al relating to removal of AMT.

Claim Rejections - 35 USC § 103

Claim 55 is rejected under 35 U.S.C. 103(a) as being unpatentable
5 over the references as applied to claims 1-9 and 56-59 above, and further in view of Park et al (5,789,601) (newly applied).

The claim requires the psoralen to be brominated psoralen.

Park et al disclose using brominated psoralen (col 20, line 30) for inactivation of viral and bacterial contaminants in blood.

10 When using a hypercrosslinked copolymer as the material of Foley et al having affinity for a psoralen compound, it would have been obvious to use brominated psoralen as the psoralen compound as suggested by Park et al.

Double Patenting

15 Claims 1-9 and 55-59 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-47 of U.S. Patent No. 6,544,727 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because the presently claimed invention would have
20 been obvious from the claims of the patent drawn to a system containing an adsorbent material which can be a hypercrosslinked resin for use to remove psoralen compounds from blood products.

Response to Arguments

Applicants urge that the restriction is improper since a device
25 and method were restricted in 08/660,910. However, 6,544,727 is not a

division of 08/660,910, and the system claimed in this patent is not a result of restricting in 08/660,910.

Double Patenting

Claims 1-9 and 55-59 are provisionally rejected under the
5 judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 53-110 of copending Application No. 09/972,323, claims 53-115 of copending Application No. 10/011,202, claims 1-24 of copending Application No. 09/872,384 or claims 58, 60, 65, 66-97 and 104-114 of copending Application No. 10/016,323.
10 Although the conflicting claims are not identical, they are not patentably distinct from each other because the presently claimed invention would have been obvious from the claims of the copending applications drawn to using an adsorbent material which can be a hypercrosslinked resin to remove psoralen compounds from blood
15 products.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

Applicants state that double patenting rejections will be
20 addressed when claims are otherwise allowable.

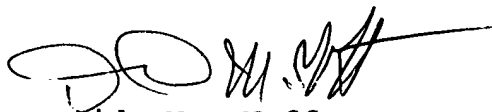

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Naff whose telephone number is 571-272-0920. The examiner can normally be
25 reached on Monday-Friday 9:30-6:00.

Art Unit: 1651

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 751-273-8300.

5 Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For
10 more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
